

Shadman Shahzahan

Software Engineer | Full-Stack, Backend, Cloud Infrastructure

Seattle, WA | (360) 356-8164 | shahzahans@outlook.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

WORK EXPERIENCE

Attention.ad

June 2025 – August 2025

Software Engineering Intern

Remote

- Engineered RESTful APIs with Node.js, Express, and MongoDB to drive real-time data pipelines for a creator-centric ad platform, facilitating smooth content distribution across numerous user engagements.
- Designed and fine-tuned scalable MongoDB schemas for high-frequency interaction data, enhancing data integrity and consistency among simultaneous user content workflows in a live production setting.
- Implemented comprehensive CI/CD pipelines on Render and Netlify, automating the build, test, and deployment phases to decrease manual release overhead by 25% and enhance the team's delivery speed.
- Discovered and addressed asynchronous bottlenecks in essential backend services, restructuring promise chains and query patterns to reduce API response times by 15% for the platform's key endpoints.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Java, C++

Backend: Node.js, Express.js, FastAPI, REST APIs, Prisma, PostgreSQL, MongoDB

Frontend: React.js, React Native, Expo, HTML/CSS

Cloud & Tools: AWS RDS, Firebase, Docker, Git, GitHub, CI/CD, Linux/Bash

Data/AI: Pandas, NumPy, Qiskit, basic ML workflows

PROJECTS

TripSplit – Full-Stack Expense Splitting Mobile App

September 2025 – Present

Node.js, Express, PostgreSQL, Prisma, Firebase Auth, AWS RDS, Expo React Native

- Architected a complete backend system using Node.js and Express for overseeing multi-user travel expenses, shared balances, real-time settlements, and secure transaction records across simultaneous sessions.
- Designed normalized PostgreSQL schemas using Prisma ORM for users, trips, expenses, participants, account balances, and payment history, ensuring referential integrity throughout all relational data.
- Engineered secure Firebase Auth middleware featuring JWT validation and established database-level transaction locking to ensure precise balance computations during concurrent user updates.
- Deployed a cloud-based PostgreSQL database on AWS RDS while connecting the REST API to an Expo React Native mobile client, delivering a fully integrated cross-platform application.

AoMatch – Document Extraction & Review Pipeline

April 2026

React, FastAPI, Python, MongoDB, PDF Processing

- Automated PDF extraction system utilizing FastAPI and Python, analyzing and organizing grant and compliance documents to save hours of manual review for each submission cycle.
- Shipped a React interface for instant review and export of organized fields, decreasing manual data input by 85%.
- Established field-level provenance tracking that connected each extracted value to its source sentence in the original document, facilitating complete auditable traceability for compliance review processes

QuestEats – AI Restaurant Discovery Platform

December 2025

React, Node.js, Express, MongoDB, Yelp Fusion API, OpenAI API

- Developed a comprehensive AI restaurant discovery platform during a 24-hour hackathon, combining the Yelp Fusion and OpenAI APIs to provide over 100 mood-driven live listings and an engaging gamified badge system that enhanced user interaction beyond the default top-rated options.

IBM Quantum Challenge Project

May 2026

Python, Qiskit, IBM Quantum, Jupyter Notebook, NumPy, Pandas, GitHub

- Finished the IBM Quantum Challenge by creating and evaluating Qiskit-based quantum classification circuits compared to classical standards, utilizing data preprocessing and circuit-level tests with fully reproducible notebooks shared on GitHub.

EDUCATION

Seattle Pacific University

Seattle, WA

Bachelor of Arts in Computer Science, Minor in Data Analytics,

Graduated June 2026
