

Shadman Shahzahan

SOFTWARE ENGINEER | CLOUD INFRASTRUCTURE

Seattle, WA | 360-356-8164 | shahzahans@outlook.com | Portfolio: www.shahzahans.com | [linkedin.com/in/shahzahans](https://www.linkedin.com/in/shahzahans) | <https://github.com/shahzahans>

Experience

Attention.ad | Software Engineering Intern

June 2025 – August 2025

- Built REST APIs with Node.js, Express, and MongoDB to power real-time data pipelines for a creator-focused ad platform.
- Designed MongoDB schemas for high-frequency interaction data, improving consistency under concurrent writes in production.
- Set up CI/CD pipelines on Render and Netlify to automate build, test, and deploy, cutting manual release overhead by 25%.
- Resolved async bottlenecks in backend services by restructuring promise chains and query patterns, reducing API latency 15% on key endpoints.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, Java, C++

Backend: Node.js, Express.js, FastAPI, REST APIs, Prisma, PostgreSQL, MongoDB

Frontend: React.js, React Native, Expo, HTML/CSS

Cloud & Tools: AWS RDS, Firebase, Docker, Git, GitHub, CI/CD, Linux/Bash

Data/AI: Pandas, NumPy, Qiskit

Projects

TripSplit – Expense Splitting Mobile App

September 2025 - Present

Node.js, Express, PostgreSQL, Prisma, Firebase Auth, AWS RDS, Expo React Native

- Architected a Node.js/Express backend for multi-user travel expenses, handling shared balances, real-time settlements, and transaction records across concurrent sessions.
- Designed normalized PostgreSQL schemas with Prisma ORM (users, trips, expenses, participants, balances, payment history), enforcing referential integrity across the data model.
- Built Firebase Auth middleware with JWT validation and database-level transaction locking to keep balance calculations correct during concurrent updates.
- Deployed PostgreSQL on AWS RDS and connected the REST API to an Expo React Native client for a full cross-platform app.

IBM Quantum Challenge Project

May 2026

Python, Qiskit, IBM Quantum, Jupyter Notebook, NumPy, Pandas

- Developed Qiskit quantum classification circuits on Iris and MNIST datasets that matched classical baseline accuracy, demonstrating quantum viability for small-scale supervised learning tasks. Documented implementation in Jupyter notebooks and published to GitHub to enable reproducibility across the quantum computing community.

AoMatch – Document Extraction & Review Pipeline Tool

April 2026

React, FastAPI, Python, MongoDB, PDF Processing

- Built a PDF extraction system using FastAPI and Python that automated the analysis of grant and compliance documents, reducing manual review time by approximately 60% per cycle.
- Shipped a React interface for reviewing and exporting extracted fields, reducing manual data entry by 85%.
- Implemented field-level provenance tracking that links each extracted value to its source sentence, giving reviewers auditable traceability.

QuestEats – AI Restaurant Discovery Platform

December 2025

React, Node.js, Express, MongoDB, Yelp Fusion API, OpenAI API

- Built an AI restaurant discovery app in a 24-hour hackathon, combining the Yelp Fusion and OpenAI APIs to serve 100+ mood-based listings with a gamified badge system.

Education

Seattle Pacific University |

Seattle, WA

Major: Computer Science | Minor: Data Analytics

Graduated June 2026
